

**DATA TRANSMISSION FOR MOBILE WIRELESS COMMUNICATION
DEVICES**

5 ABSTRACT OF THE DISCLOSURE

 A method and apparatus to transmit data between a communication
network and a mobile station just before prior to the mobile station switching
from a fast data rate mode, such as digital mode, to a slow data rate mode,
such as analog mode. The mobile station requests or the communication
10 network transmits data prior to the mobile station entering the slow data rate
mode, therefore eliminating the need to transmit data over a slow data rate
mode, such as analog mode.
